

# SG-Environmental Policy

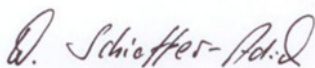

For our product-lines ‚Flexible hoses ‘and ‘Rubber and plastic systems‘ we aim for energy-efficient, sustainable and environmentally compatible solutions. We bear in mind these objectives even in procurement of goods and services as well as when designing equipment or processes. Environmental effects of new activities, products, technologies and procedures are valued before implementation.

Applicable laws, regulations and official requirements are to be adhered at any time. Regarding technical solutions for improvement of energy efficiency and diminution of pollution we are orientated by the-state-of-art.

Thus in a continuous enhancement we will steadily achieve to the implementation of our environmental impact and spare exhaustible resources at the same time. We always maintain the guidelines of our environmental management in accordance with DIN EN ISO 14001. We provide required information and have got suitable means to settle operational and strategic energy objectives. If necessary, these processes will be monitored and evaluated systematically and continuously. In addition we check our structural preconditions regularly in order to fulfill all our objectives. We comply with commitments made.

Environmental management requires conscientious employees who contribute and follow actively the realization of these guidelines at all levels. Our employees are supported by corresponding education and training. We continue an open dialogue with interested groups, customers and authorities on ecological relevant issues concerning the company. Management and employees commit themselves to realize and adhere this environmental policy.

The Management
